- Underlying causes/failures – Frequency or repetition of a task, improper postures, possible safety program deficiencies, i.e.; in effective rules/regulations, ineffective employee training, inadequate or unsafe job procedure, etc.

CONTROLS

Unsafe conditions and unsafe acts are symptoms of the underlying causes of accidents. Accident investigations should strive to identify the *underlying* causes, and recommendations should address corrective actions, both administrative and physical in nature. Consideration should be given to the physical work environment, managerial controls, and individual characteristics all of which contribute to industrial actions.

FOLLOW UP

Once investigations are completed, they should be periodically reviewed. This will ensure that proper controls were implemented and that the corrective actions remain a part of the safety program.

The safety committee and/or management are good sources to conduct this review. They can determine if the investigations are completed in a timely fashion, if they're thorough and if they're accurate. They should recommend any additional corrective action needed and monitor the implementation of any recommended controls.
